

# COMP 2804

## Exam Study Session -

### Winter 2026

Nguyen-Hanh Nong  
nguyenhahnong@cmail.carleton.ca

# Study Session Format:

- Go over possible topics on the exam
- List tips and tricks to succeed (based on intuition and past experience)
- Go over ~11 practice questions, mix of short answer and multiple choice across all relevant chapters from the course
  - Counting
  - Recursion
  - Probability
  - Random Variables
  - Probabilistic Method
- Open Q & A

# DISCLAIMER:

- The material presented in this slides and during the study session will not influence what is on the final exam in one way or another - this is not the definitive content of the final.
- This is not a comprehensive study guide - it is more intended to complement your studies.
- Please review the content from the professor and the textbook as well.

# Tips and Tricks For Exam:

1. No cheat sheet, so memorize common formulas (ex. Linearity of Expectation, Independent Events)
2. Test on small examples (especially useful if the question is not computational or the question is recursive)
3. Study past exams over past assignments or textbook questions
  - a. I would be careful with textbook questions since there aren't any known accepted solutions

## Evaluations

Practice previous evaluations from Carleton University's Computer Science courses.

- COMP 2804: 2022 Winter Final
- COMP 2804: 2019 Fall Final
- COMP 2804: 2019 Fall Midterm
- COMP 2804: 2019 Winter Final
- COMP 2804: 2019 Winter Midterm
- COMP 2804: 2018 Fall Final
- COMP 2804: 2018 Fall Midterm
- COMP 2804: 2018 Winter Final
- COMP 2804: 2018 Winter Midterm

### Solution: 2019 Fall Final - 17

Author: Michiel Smid

#### Question

We choose an element  $x$  uniformly at random from the set  $\{1, 2, 3, \dots, 10\}$ . Define the events

- $A = "x \text{ is even}"$ ,
- $B = "1 \leq x \leq 5"$ .

Which of the following is true?

- (a) The events  $A$  and  $B$  are not independent.
- (b) None of the above.
- (c) The events  $A$  and  $B$  are independent.

COMP 2804: Discrete Structures II    COMP 2804 Final Exam    Independent Events (5,11)

#### Solution

- Let's determine  $S$   
 $|S| = 10$
- Let's determine  $A$   
There are 5 even numbers; 5  
 $|A| = 5$   
 $Pr(A) = \frac{5}{10} = \frac{1}{2}$
- Let's determine  $B$   
There are 5 numbers between 1 and 5: 5  
 $|B| = 5$   
 $Pr(B) = \frac{5}{10} = \frac{1}{2}$
- Let's determine  $A \cap B$   
There are 2 numbers that are both even and between 1 and 5, which are 2 and 4: 2  
 $|A \cap B| = 2$   
 $Pr(A \cap B) = \frac{2}{10} = \frac{1}{5}$

Avatar: The Last Airbender is pretty high tier

Let's check for independence

$$Pr(A \cap B) = Pr(A) \cdot Pr(B)$$
$$\frac{1}{5} = \frac{1}{2} \cdot \frac{1}{2}$$
$$\frac{1}{5} = \frac{1}{4}$$

The equation is not false; therefore, they're dependent

# Sample/Practice Questions

- 11 Questions
  - 1 Counting Question
  - 2 Recursion Question
  - 2 Probability Questions
  - 5 Random Variables and Expectation Questions
  - 1 Probabilistic Method Question

# Question 1

A *flip* in a bitstring is a pair of adjacent bits that are not equal. For example, the bitstring 010011 has three flips: The first two bits form a flip, the second and third bits form a flip, and the fourth and fifth bits form a flip.

- Determine the number of bitstrings of length 7 that have exactly 3 flips at the following positions: The second and third bits form a flip, the third and fourth bits form a flip, and the fifth and sixth bits form a flip.
- Let  $n \geq 2$  and  $k$  be integers with  $0 \leq k \leq n - 1$ . Determine the number of bitstrings of length  $n$  that have exactly  $k$  flips.

# Question 2

---

## 9 Question 9: Recurrence for Strings with No $aa$ or $bb$

### Question

Let  $S_n$  count the number of length- $n$  strings over  $\{a, b, c\}$  containing no  $aa$  or  $bb$ . Which recurrence holds for  $n \geq 1$ ?

### Choices

- (a)  $S_n = S_{n-1} + \sum_{i=0}^{n-2} S_i$
- (b)  $S_n = S_{n-1} + \sum_{i=0}^{n-2} 2S_i$
- (c)  $S_n = S_{n-1} + \sum_{i=1}^n 2S_{n-i}$
- (d)  $S_n = S_{n-1} + 4S_{n-2}$
- (e)  $S_n = S_{n-1} + 2S_{n-2}$

# Question 3

---

## 10 Question 10: Solving a Linear Recurrence

### Question

The function  $T$  is defined by

$$T(n) = \begin{cases} 3, & n = 0, \\ 2T(n-1) + 3, & n \geq 1. \end{cases}$$

Which is true?

### Choices

- (a)  $T(n) = 3^{n+1}$
- (b)  $T(n) = 3n$
- (c)  $T(n) = 2(3^{n+1} - 1)$
- (d)  $T(n) = 3(2^{n+1} - 1)$
- (e)  $T(n) = 2^{n+1} + 1$

# Question 4

---

**11 Question 11:**  $\Pr(D \bmod 4 = 0)$

**Question**

Let  $D$  be a fair roll of a 6-sided die. What is  $\Pr(D \bmod 4 = 0)$ ?

**Choices**

- (a)  $1/2$
- (b)  $1/5$
- (c)  $1/3$
- (d)  $1/6$
- (e)  $1/4$

# Question 5

---

## 14 Question 14: Number of Sums Equal to 5

### Question

Roll a die  $2n$  times to form the sequence

$$S = \{(D_1 + D_2), (D_3 + D_4), \dots, (D_{2n-1} + D_{2n})\},$$

whose entries are all in  $\{2, \dots, 12\}$ . What is the probability that exactly  $k$  entries equal 5?

### Choices

- (a)  $\binom{n}{k} \left(\frac{1}{36}\right)^k \left(\frac{35}{36}\right)^{n-k}$
- (b)  $\binom{n}{k} \left(\frac{1}{12}\right)^k \left(\frac{11}{12}\right)^{n-k}$
- (c)  $\binom{n}{k} \left(\frac{1}{9}\right)^k \left(\frac{8}{9}\right)^{n-k}$
- (d)  $\binom{n}{k} \left(\frac{1}{11}\right)^k \left(\frac{10}{11}\right)^{n-k}$
- (e)  $\binom{n}{k} \left(\frac{1}{6}\right)^k \left(\frac{5}{6}\right)^{n-k}$

# Question 6

---

## 18 Question 18: $E(\max(X, Y))$ for 4-Sided Dice

### Question

Let  $X$  and  $Y$  be the results of rolling two 4-sided dice. Let  $Z = \max(X, Y)$ . What is  $E(Z)$ ?

### Choices

- (a)  $13/4$
- (b)  $7/2$
- (c) 3
- (d)  $25/8$
- (e)  $5/2$

# Question 7

---

## 19 Question 19: Expected Number of Shouters

### Question

$n \geq 3$  friends stand in a circle and flip coins. A friend shouts "Huzzah!" if their flip differs from both neighbors. Let  $X$  be the number of shouters. What is  $E(X)$ ?

### Choices

- (a)  $n/2$
- (b)  $n/8$
- (c)  $n/3$
- (d) None of the above
- (e)  $n/4$

# Question 8

You go fishing in a lake. There are two types of fish (trout and pike) in the lake. Each time you cast your line, you catch a trout with probability  $4/5$  and you catch a pike with probability  $1/5$ . You throw every fish you catch back in the water, so the result of each cast is independent of which types of fish you caught on previous casts. You stop fishing once you've caught at least one trout and at least one pike.

**What is the expected number of casts you make before you stop fishing?**

# Question 9

---

Let  $D$  be a standard deck of cards.

For a card  $c \in D$ , let the value of  $X(c)$  be equal to the value of the card. So 1 if the rank is A, 2 if the card is 2, ..., and 10 if the rank is in  $\{J, Q, K\}$ .

Assume you are dealt a standard hand of 5 cards.

Let the following be random variables:

$V$  = The sum of the values of the cards in your hand,

$F$  = The number of face cards (that is,  $J, Q$ , or  $K$ ) in your hand.

1. What are  $\mathbb{E}(V)$  and  $\mathbb{E}(F)$ ?
2. Are  $V$  and  $F$  independent random variables?

# Question 10

---

**23 Question 23: Is  $E(X^2) = (E(X))^2$  Always True?**

**Question**

Is the following true or false? For any random variable  $X$ :

$$E(X^2) = E(X) \cdot E(X).$$

**Choices**

- (a) Neither true nor false
- (b) True
- (c) False

# Question 11

---

## Question

100 students each choose one of 10 study groups, independently and uniformly at random. (So each student picks each group with probability  $1/10$ .)

Let  $X$  be the number of study groups that end up with *no* students. What is  $E(X)$ ?

## Choices

- (a)  $10 \left(\frac{9}{10}\right)^{100}$
- (b)  $10 \left(\frac{1}{10}\right)^{100}$
- (c)  $\left(\frac{9}{10}\right)^{100}$
- (d)  $100 \left(\frac{9}{10}\right)^{10}$
- (e)  $10 \left(1 - \left(\frac{9}{10}\right)^{100}\right)$
